# Real-Time Clock

Note:  
Datasheet says slave address is 0xD0  
with a R/W bit appended, since 0xD must  
be 4-bits wide the actual 7-bit address is  
0x68 (110 1000), and becomes 0xD0 during a  
write operation (1101 0000)

# Display & Touch Controller

LCD PN:  
Shenzhen Jinghong Electronics Co., Ltd.  
JH057N00900

Note:  
No power-up sequence is  
given in the spec sheet

The upper 7 bits are the address,  
and bit 0 is used to select read or write.  
GT5688 has two slave device addresses to choose from:

	7-Bit Address	8-Bit Write Address	8-Bit Read Address
INT LOW	0x5D	0xBA	0xBB
INT HIGH	0x14	0x28	0x29

Every time you power on or reset, you need  
to use the INT pin to set the I2C address:

Cap-Touch FPC:

Pin#	Definition
1	SCL
2	SDA
3	INT
4	RESET
5	VDD2_R5
6	GND

Front: Back:

C

D

# WWAN M.2

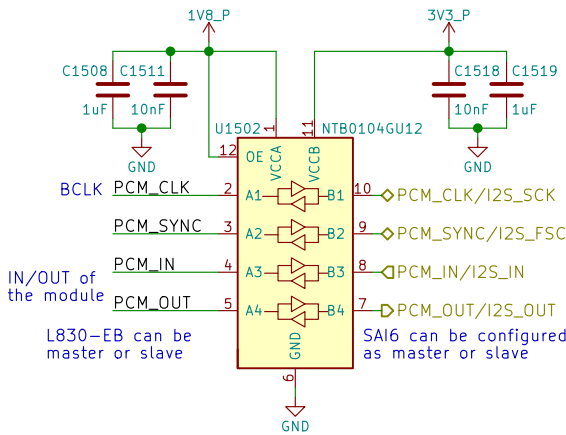

Standards:  
3GPP TS 51.010-1  
ISO/IEC 7816

DET is normally closed!  
<10cm away from module!  
UIM-CLK up to 5MHz

SIM\_DETECT:

Sierra, Huawei, and Telit are Active High  
SimCom and Gemalto needs to be inverted!  
"When SIM is present, SIM\_DET is high"  
SIM\_DET needs to open when card inserted!

"It is recommended to place the UIM\_RST trace  
between UIM\_DATA and UIM\_CLK to provide isolation"  
"It is recommended to surround the UIM\_DATA with ground."

Some modems are NC  
for the USB3.0 interface  
Some modules do  
GNSS over USB  
Some modems require  
the USB3.0 interface  
Typically host support  
for USB3.0 is optional  
USB3.0 unused with  
Gemalto, SimCom, Fibocom

Even pins 40-48 are unused

	Pin	Port Config_0 <sup>1</sup>	Port Config_1 <sup>2</sup>	Port Config_2 <sup>3</sup>	Port Config_3 <sup>4</sup>

# Audio

Reference:  
[http://www.52rd.com/S\\_txt/2011\\_3/TXT26685.htm](http://www.52rd.com/S_txt/2011_3/TXT26685.htm)  
<http://www.sengpielaudio.com/calculator-transferfactor.htm>  
<https://electronics.stackexchange.com/questions/31442/how-can-i-switch-this-audio-jack-using-its-own-mechanical-switches-without-cre>  
 (Nit6 does the same)  
 +Zener diode to protect against ranges outside of -0.9V to 3.3V

dB specs in datasheet is a unit of power gain (not dBu or VU) with respect to the DAC's unattenuated output

"HP Output - 62.5mW max, 1.02kHz sine into 16Ω load at 3.3 V"  
 $\Rightarrow (1V)^2/(16\Omega)=62.5mW$   
 $\therefore V_{rms}=1V \Rightarrow V_p(\text{amplitude})=1.414V$   
 $\therefore I_{rms}(\text{max})=62.5mA$

If HP\_DET is HIGH for >100ms then HPs are present

S/E button on earbud headsets shorts the mic for key function

Could use FSA8008 to detect mic

$Z(\text{hp}) \geq 16\Omega$

Pin 5 (tip switch) is NC, open when inserted  
 If just headphones then HP\_DET=HIGH, R(mic)=0  
 may add ~220uF cap parallel to Zener

Ext-Mic enabled MIC\_SEL=LOW  
 Int-Mic enabled MIC\_SEL=LOW  
 Add TVS next to int-mic? (OpenMoko does this)  
 $-37dB=14.1254mV/Pa$   
 $\therefore \text{mic produces } 14.1254mV_{rms} \text{ when exposed to a } 1kHz \text{ tone of } 94dB-SPL \text{ at the capsule (or } 19.98mV \text{ amplitude)}$   
 $\Rightarrow 40dB \text{ gain would produce } -2V \text{ amplitude (4Vpp, clipping)}$   
 $30dB \text{ gain would produce } -0.632V \text{ amplitude (1.264Vpp)}$   
 $38.33dB \text{ gain would yield } 3.3V_{pp}$

## LCR Measurements:

Earbud Microphone: @1kHz  
 $L_s = 3.844mH$   
 $L_p = 15.757H$   
 $C_s = 6.583uF$   
 $C_p = 1612.8pF$   
 $R_s = 1.5465k\Omega$   
 $R_p = 1.5478k\Omega$   
 $\theta = -0.8deg$

Headset Speaker: @1kHz  
 $L_s = 244.4uH$   
 $L_p = 141.99mH$   
 $C_s = 103.6uF$   
 $C_p = 178.77nF$   
 $R_s = 36.860\Omega$   
 $R_p = 36.860\Omega$   
 $\theta = -2.3deg$

Earbud Speaker: @1kHz  
 $L_s = 25.2uH$   
 $L_p = 311.0mH$   
 $C_s = 1.0mF$   
 $C_p = 81.95nF$   
 $R_s = 17.0300\Omega$   
 $R_p = 17.0340\Omega$   
 $\theta = 0.5deg$

The diagram illustrates the internal structure and connections of the Smart Card module (U2201). The module is divided into three main sections: SEC11110 (top), Smart Card (middle), and Smart Card (bottom). The top section includes USB\_DP, USB\_DM, VDD5, and VDD33 pins. The middle section includes SC1\_VCC, SC1\_RST, SC1\_CLK, SC1\_I/O, SC1\_C4, SC1\_C8, and SC1\_PRSTN/JTAG\_TMS pins. The bottom section includes RESET Misc./JTAG, TEST, SC\_LED\_ACT/JTAG\_TDO, JTAG\_CLK, and VSS(flag) pins. The Smart Card section includes a Smart Card chip (J2201) with pins VCC, RST, CLK, GND, VPP, I/O, DET, C8, C4, and SCH. The diagram shows various components like capacitors (C2201, C2202, C2203), resistors (R2201, R2202, R2203), and a 5V\_P supply. The module is labeled ISO/IEC 7816.

# Haptic Motor

PWM pins occupied:  
 GPIO1\_I001 - LCD Backlight  
 GPIO1\_I013 - LED  
 GPIO1\_I014 - Ethernet (CLKO\_25MHz)  
 GPIO1\_I015 - CSI (CLKO2)

PWM needed?  
 Only needs to be toggled  
 ON 1 sec, OFF 1 sec (0.5Hz)  
 Can MUX as either  
 GPIO or PWM2  
 swapping with LED

When the motor is off  
 both terminals are at GND

Motor will have wire leads  
 with a 2-pin Molex or Boom Precision  
 connector installed (by request)!  
 Metal housing is floating  
 (not connected to either pin)  
 => could connect housing to GND

Cheaper Motor Connector:
